### *Economic impact of parasites/diseases on a highly popular fish species in Norway*

14. november 2023, Livade 1.0 (Livade 6, Izola), predavalnica Epsilon (pritličje), ob  
12.00 uri

Oddgeir Andersen

The focus of this talk will be on the economic impact of parasites/diseases on a highly popular fish species in Norway, the Atlantic salmon (*Salmo salar*) and the *Gyrodactylus salaris* parasite. The lecturer will present how to measure the impact by using revealed preferences method (travel cost method) and the cost-benefit ratio of eradicating the parasite. *G. salaris* was introduced in Norway in 1975 by the fish-farming industry, and infected more than 50 rivers out of the 400 rivers with Atlantic salmon.
